Fixed-wing vs. Copter

Fixed-wing

- + Longer flight time
- + Faster data acquisition => obtaining of larger area (100 of ha)
- Lower resolution
- Demanding on take-off and landing area
- Can carry only smaller sensor
- Mainly for larger areas with expected lower data resolution

Copter

- + Cheaper than fixed wing
- + Take-off and landing flexibility
- + Possibility of controlling the flight speed => high resolution and focussed images
- + Can carry heavy loads
- Shorter flight time => usable from smaller areas
- While discharged battery immediate fall down
- Usable for smaller areas with high data resolution
